1. The first part of the paper is devoted to a discussion of the  
theoretical aspects of the problem. It is shown that the  
problem is equivalent to a problem in the theory of  
differential equations. The main result of this part is  
the theorem that the problem has a unique solution if  
the initial conditions are satisfied. The proof of this  
theorem is given in the next section.

2. In the second part of the paper, the problem is solved  
for a specific case. It is shown that the solution is  
given by the formula  
$$y = \frac{1}{2} (1 + \cos x)$$
  
which satisfies the initial conditions. The solution is  
also shown to be unique. The paper concludes with a  
discussion of the physical interpretation of the results.
